**Rapport sur creation d'un site
web a l'aide d'un CMS**

Sommaire

- 1. Introduction**
- 2. Installation du CMS**
- 3. Personnalisation du Thème**
- 4. Création et personnalisation du site web**
- 5. Vérification des fonctionnalités**
- 6. Communication avec la Base de Données**
- 7. Conclusion**

Introduction

This report presents the creation of an e-commerce website for selling PC accessories and components. The project focuses on designing a user-friendly platform with features such as product management, categories, reviews, and an intuitive dashboard for efficient administration. The site is built on WordPress, leveraging its robust capabilities and a MySQL database to deliver a seamless shopping experience.

Installing a CMS(WordPress)

1. creating an account on a hosting platform : infinityfree

- The process starts by creating an account on InfinityFree. This is a straightforward step where the user provides an email address, a password, and other required information to sign up for free hosting services

And that shows the control panel of the hosting platform which we can download WordPress CMS from it

2. installing wordpress using softaculous

InfinityFree provides the Softaculous App Installer, which simplifies the installation of WordPress. I navigated to the installer and selected WordPress as the CMS for my website

3. Accessing the WordPress dashboard

Once WordPress was installed, I accessed the WordPress dashboard to begin configuring the website. The dashboard provides a centralized interface for managing the website's content, appearance, and functionality.

And here is our website dashboard :

-Creating and customizing the website

-Project theme :

The purpose of the project was to **create an e-commerce website for selling PC accessories and components**. The website needed to have a nice design, easy navigation, and functionality for managing products, categories, and customer interactions.

. choosing and installing a theme :Astra

- To achieve this, I selected the Astra theme, known for its compatibility with e-commerce plugins like WooCommerce, customizable design, and pre-built templates tailored for online stores.

- Click on **Add New** at the top of the page.
- In the search bar, type **Astra**.
- When the Astra theme appears, click on **Install**.
- After installation, click **Activate**.

After activating Astra, you can install a **Starter Template** to get a pre-built layout for your website. This will save time by giving you a layout tailored to e-commerce

5. Customizing the website

-Content Structure (Structure du contenu):

The website's home page is built using WordPress with the Astra theme and features a modern layout including:

- Main navigation menu
- Hero section with "Build your PC" campaign container
- 25% discount promotion
- Clear call-to-action buttons containers

- Pages and Categories Implementation

- Main Pages: Home, Store, About, Contact
- Product Categories: PC, Monitors, Accessories
- Shopping Cart functionality
- User Account system

We used **Elementor** to optimize the web pages

The main categories are organized into three sections for the same page filtered by the categories “store page”

- PC Components
- Accessories
- Monitors

-about US page :

Who We Are

At our shop, we provide high-quality PC accessories and components to tech enthusiasts, gamers, and professionals. Our goal is to offer a wide selection of reliable products at competitive prices, backed by excellent customer service. Whether you're upgrading your setup or building a new PC, we're here to help you find the best gear for your needs

A Few Words About

Our Team

It's just me 😊

Abdallah delhoum
Lead Developer

- The About Us page provides key insights into the company. It includes:
- **Company Overview:** A brief description introducing the business and its values.
- **Team Introduction:** A section highlighting the lead developer and key team members.
- **Mission Statement:** A clear statement outlining the company's goals and vision.
- **Team Photo:** A professional photo of the team, showcasing the people behind the business.

-Contact us page :

- The Contact Us page facilitates easy communication with the company. It includes:
- **Main Header:** "Contact Us" clearly displayed at the top of the page.
- **Department Contacts:** Separate sections for each department with contact details:
 - Sales

- Complaints
 - Returns:
 - Marketing:
 - **Contact Form:** A section for customers to submit inquiries directly through the website.
-
- **Support Message:** A reassuring message, "We're here to help," offering assistance to visitors.

User Management

The website incorporates the following user management features:

- **Customer Accounts:** Users can create and manage their personal accounts, allowing them to track orders and save preferences.
- **Shopping Cart System:** A shopping cart allows customers to add and review products before proceeding to checkout.
- **Secure Checkout Process:** A streamlined and secure checkout process ensures safe transactions for users.
- **Admin Dashboard Access:** Admins can manage products, users, and orders through a dedicated dashboard.

Throughout the website, there is consistent navigation and branding, ensuring a cohesive user experience across all pages.

Shopping card system interface :

The Store page :

And the left container which has:

a filtering fonction by price and shows the categories with the amount available of each one -
-the rating of the product and it best selles

-The right container:

- The Store page displays products from different categories (e.g., Everything, Monitors, PC, Accessories).
- Each product is shown with a name, description, image, and an Add to Cart button.
- Clicking a product redirects to a detailed page where users can rate and comment.
- Add to Cart adds the product to the shopping cart with the chosen amount .

And the left container which has

Verification of functionality :

- **Add to Cart:** When clicked, the product is added to the cart.

Example : we add a monitor to our card

- **Cart & Total:** The cart updates with the added item, and the total amount is displayed in the header.

- **Ratings and Reviews:** Users can rate and comment on products.

I rated a product and left a comment and then send it :

The screenshot shows a product review interface. At the top, there's a category label 'Category: Monitors'. Below it, there are two tabs: 'Description' and 'Reviews (1)'. The 'Reviews (1)' tab is active, showing a review by 'abdallah' dated 'December 25, 2024'. The review has a 5-star rating and the text 'great monitor'. Below the review, there's a section to 'Add a review' with a 'Your rating *' field (5 stars) and a 'Your review *' text area.

-Communication with the database :

As part of the e-commerce functionality, communication with the database is essential for managing key elements like products and users. In the WordPress admin dashboard, two key sections handle these interactions:

1. User Management:

The screenshot shows the WordPress User Management interface. At the top, there's a header 'All (1) | Administrator (1)' and a 'Search Users' button. Below the header, there are bulk action controls: 'Bulk actions' (dropdown), 'Apply', 'Change role to...' (dropdown), and 'Change'. The main table lists users with columns: 'Username', 'Name', 'Email', 'Role', and 'Posts'. There is one user listed: 'abdallah' with the email 'delhouma221@gmail.com' and the role 'Administrator'. At the bottom, there's a footer 'Thank you for creating with WordPress.' and a link 'Get Version 6.7.1'.

Username	Name	Email	Role	Posts
abdallah	—	delhouma221@gmail.com	Administrator	1

a. **Table:** Users Table

Like my admin account that am login with curently

b. WordPress stores all user-related information in the database, which includes customer accounts, their roles, and other personal details. Through the **Users** section in the WordPress dashboard, you can manage and modify these accounts.

Username (required)	
Email (required)	
First Name	
Last Name	
Website	
Password	Generate password z1Jn%JU)*Ii5\$1iULXwdewZs Hide Strong
Send User Notification	☒ Send the new user an email about their account
Role	Customer
Add New User	

- c. Actions include adding new users, editing their details, and setting user roles (like customers, admins, etc.), all of which are directly reflected in the database.

2. Product Management:

-Conclusion:

In conclusion, the development of the e-commerce website using WordPress and Astra theme was successful. The site now features smooth navigation, product management, and a functional shopping experience. Integration with the WordPress dashboard allows effective database management, ensuring the website operates as a fully functional online store.
